Outline

Introduction:

1. Discuss technology improvement
2. Discuss the importance of social media
3. Discuss generation gap

Methods:

1. Showing other generations new current in social media
2. Teach people how to use social media better

Results:

1. Decrease the generation gap.
2. Help in increasing communications between different generations

Discussion:

1. Summarize the results
2. Discussing the benefits

Introduction

Every day, the technology improves with a great pace to help the users of this technology in their lives and make their daily lives much easier and quicker, very popular forms of these technologies are social media which have already took a lot of our time per day and is considered the revolution of this century that have changed people's lives for ever and changed the way they think, they help people to know more information and news in a split of second without any physical efforts, but, a lot of older generations have a huge problem trying to figure out how to use these applications and benefit of its advantages due to the rapid change in that technologies so, it's very important to try to help these older generations to use social media not to feel excluded.

Methods

One of the most beautiful currents in social media is photo modifications or filters, the filters are some effects put on a photo to change the way it looks, maybe the color, the feeling, the shape or even the photo itself, these filters are so fun to use and looks amazing when you try it, so I really recommend trying them out, there are a lot of applications which provides filters feature, one of the most popular apps is Snapchat which is a social media application which help people communicate with each other by sending direct messages (DMs) and sending photos, these photos can be modified or changed by filters, and it is quite simple, you just highlight the desired filter and the app will show you a preview of what the photo may look like, and when you want to capture that photo you just press capture button, and it's that simple and you can have a lot of different filters to use.

Results

Telling people from older generations things that characterizes our generation helps in decreasing the gap between generations, that a grand father can talk to his grand son and have a deep conversation without everybody in this conversation feels that the other person can't understand what he says or thinks at, which really helps to make life easier and more comfortable.

Discussion

To sum up, generation gap really harms a lot of people from older generations don't benefit from social media or technology overall, due to the great issue of them not knowing how to deal with these types of technologies, that also makes them feel excluded and unwanted, which make them feel really lonely, loneness is a really great issue which may develop to depression. Decreasing the gap between generations will really help in decreasing mental illness and will help in decreasing depression and help in sharing and increasing love all over the world.
